Solutions from SEAL Systems to Digitalize Technical Documents

Scan on demand

On demand scanning with the SEAL Systems Scan Client is convenient. The request originates from the print function. The scan list client controls the digitalization.

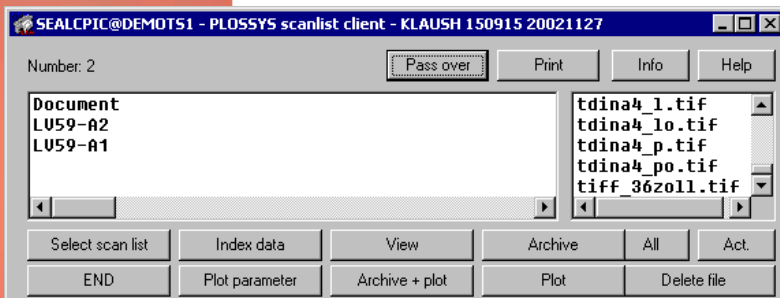

The scanned documents are linked to the waiting requests and automatically checked into the SAP DMS.

Subsequent Capture

First a document index is created in the SAP DMS. A barcode is then printed and attached to the document. The document is scanned, the barcode is identified and evaluated. The result is then checked in automatically to the existing document record in SAP DMS.

Synchronous Capture

During the document records creation, the scan interface is activated and the document is then scanned and attached to the record.

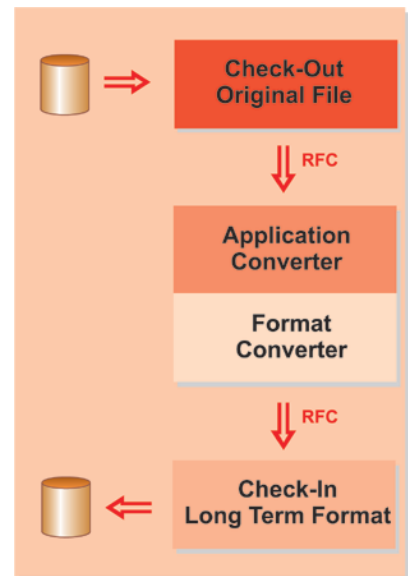

SEAL Systems Solutions for

- Mass capture
- Selective scan
- Spontaneous process
- Varified process quality through scan and after process workflows

Long Term and Viewable Format Creation

SEAL Systems delivers practice proven standard solutions for conversion of application data from CAD, Office and Publishing software.

SAP Conversion Transaction

SEAL Systems supports the SAP conversion transactions with RFC technology: Installed, configured, and tested.

Stamp and Watermark

During Conversion documents can also be stamped and/or watermarked with any information or graphic. This includes but is not limited to SAP data and company logos, release information, and more.

Graphic Formats and Long Term Formats

PDF, TIFF, HPGL, CALS, PostScript, JPEG, BMP, GIF, ...

Application Formats

- | | |
|------------|--|
| Office | DOC, XLS, PPT, ... |
| Publishing | FrameMaker, Corel Draw |
| CAD | AutoCAD, ProE, UG, SolidEdge, Inventor, SolidWorks, CATIA, ... |

ConvertWIZ

Interactive long term formats (TIFF and PDF) from any Windows application. As simple as printing!

gXconvert

Batch performance converter with 20 in and out formats. The definitive solution for professional applications and integrations.

SEAL Systems Application Converter

Batch performance generation of long term formats from CAD, Office and Publishing software.

Many Advantages through Digital Paper

Application data like Office or CAD formats are not necessarily good for long term storage. Through version, configuration and workstation dependency, content and layout original application data is not always the best archival format.

For this reason Digital Paper is the preferable media.

Proven long term formats are TIFF and PDF.

SEAL Systems products support the creation of Digital Paper from original formats used to store data in SAP.

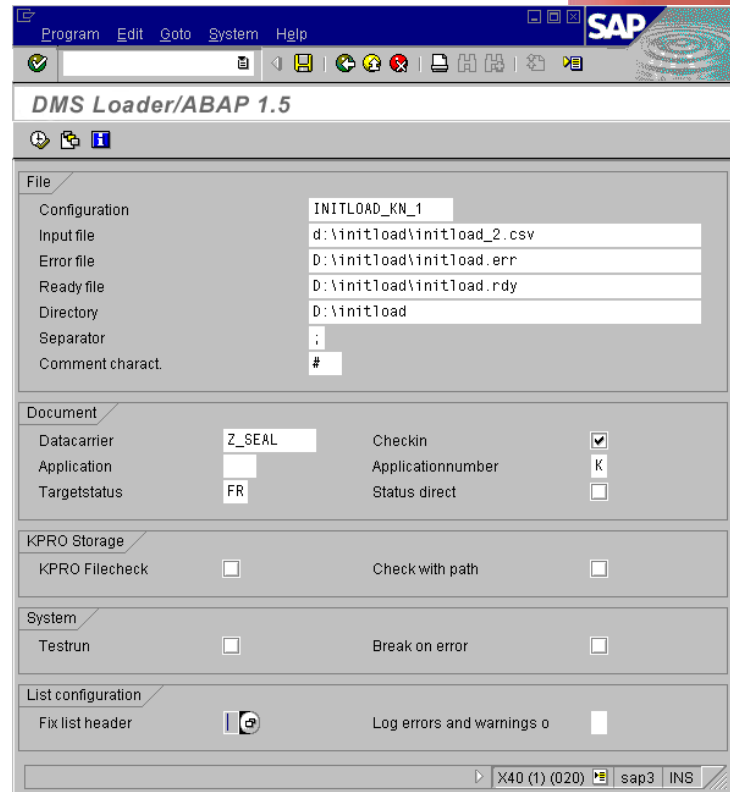

- Using the original application to converse through the SEAL Application Converter.
- Conversion into Digital Paper through gXconvert or SEAL Systems format converters.
- Check-in through DMS Loader or SAP conversion transactions.

This offers a full process chain with many configurable services like page collation or splitting, stamping and generation of additional formats.

Load Process

Used for loading from multiple sources:

- Scan process
- Old data sources
- External applications (CAD/Office)

DMS Loader – Server

This variant uses a sever based process with monitor function, status watch, and retry possibilities.

DMS Loader – ABAP

This variant is a SAP program with enhanced functions for linking and loading objects and classifications.

Integrated Services for PLM:

- SAP Look and Feel
- Easy Install
- SAP Business Objects
- Browser and Client-Server
- BAPI Compatibel

Process Oriented Import:

- On Demand Oriented, Subsequent and Synchronous Scanning
- Conversion Server
- All Graphic and Application Formats
- Mass and Single Check-In (Synchron and Asynchron)

Document Input Management with SEAL Systems

Through market and technology leadership, the investment is secure for the long term.

Professional services and consulting. Installation service performance ensures short project realization times and economical roll-out.

SEAL Systems solutions for Digital Paper!
